The success story of the Grotesque typefaces began at the dawn of the 20th century with typographic workhorses such as Akzidenz Grotesk and Aurora Grotesk amongst others. In the 1950s Max Miedinger created the first Swiss version of those typographic multi-talents, named “Neue Haas Grotesk” (today Helvetica). In parallel, Adrian Frutiger published “Univers”, both globally recognized and becoming standard choices for designers. Over the years many amazing contributions have come in the form of Haas Unica, Theinhard Grotesk and Akkurat, just to name a few. Surprisingly the world hasn’t lost its appetite for Swiss Style Grotesque typefaces.

Seventy years after the start of this success story, we are ready to make a contribution to this ensemble of outstanding type families. It took us some time to find a perfect form that fills the gap between simplicity and neutrality. We didn’t want to design yet another “neutral” typeface. We have searched for shapes that are simple and which encourage the designer to create amazing things – and by the way, make other people smile. We call this type family Nouvelle Grotesk, celebrating a desire to keep just a tiny bit of the spirit of the original meaning “Grotesque” alive for years to come.

12/15 +20

To suppose that the eye with all its inimitable contrivances for adjusting the focus to different distances, for admitting different amounts of light, and for the correction of spherical and chromatic aberration, could have been formed by natural selection, seems, I freely confess, absurd in the highest degree. When it was first said that the sun stood still and the world turned round,

the common sense of mankind declared the doctrine false; but the old saying of Vox populi, vox Dei, as every philosopher knows, cannot be trusted in science. Reason tells me, that if numerous gradations from a simple and imperfect eye to one complex and perfect can be shown to exist, each grade being useful to its possessor, as is certainly the case; if further, the eye ever varies and

Reason tells me, that if numerous gradations from a simple and imperfect eye to one complex and perfect can be shown to exist, each grade being useful to its possessor, as is certainly the case; if further, the eye ever varies and the varia-

tions be inherited, as is likewise certainly the case; and if such variations should be useful to any animal under changing conditions of life, then the difficulty of believing that a perfect and complex eye could be formed by natural selection, though insuperable by our imagination, should not be considered as subversive of the theory. How a nerve comes to be sensitive to light, hardly concerns us

Ordering

Online ordering is the fastest and most convenient way to order and receive your fonts. After payment you will instantly receive your fonts via mail.

All fonts are exclusively available through our website: www.nouvellenoire.ch

Desktop Licence

To install the typeface onto a desktop machine or server that distributes to a number of desktop machines, a desktop licence must be purchased.

Web Self-hosting Licence

To embed the typeface onto a website, a Web Self-hosting License must be purchased.

Testing fonts (Trust License)

We believe that font testing should be as simple as possible. Therefore we offer all our fonts as trial versions for free. Just go through the purchase process as if you would buy the font and select the 'Trust License' button before checkout. If you like the typeface, drop us a friendly line and we will get back to you with the full version asap. Once you will use it for a project you will need to buy the license according to your use.

Basic vs Standard

Please check Glyph Sheet + Language Support page to get detailed informations about the characterset.

Terms and Conditions

All information in this PDF is checked carefully never the less, we can not guarantee and do not take any responsibility that there are no wrong informations or failures.
